addPrompts(domain, prompts)
addLabelMapping(domain, labels)
domain defined
build training, validation and test splits
load pretrained checkpoint
weights
loop
[training iterations]
update weights on training images
select checkpoint on validation images
registerExpert(domain, checkpoint)
expert registered
colorize(test images of new and existing domains)
colorized images
compare checksums of existing checkpoints
evaluate new expert on its test set
compare existing domains before and after
